

LA CROIX by Cecil Purnell

The La Croix model preserves the original CP design of a “floating” dial but presents a bold new 51mm x 47mm case designed around five axes and incorporating a convex cylindrical sapphire crystal that is built in four separate parts. It is available in 18-carat rose or white gold and is powered by the CP-V11 manually-wound tourbillon calibre, which is a redesign of the CP3888 in use since 2010. The CP-V11 operates at 21,600 vibrations per hour and offers a power reserve of 55 hours. Water resistant to 50 metres.

KLEPCYS by Cyrus

Cyrus presented two limited editions in its Klepcys collection dedicated to the red planet at BaselWorld this year. The Klepcys incorporates a number of patented features, such as the three-dimensional calendar and retrograde time displays, as well as the innovative three-dimensional moon phase display. It is powered by the Cyrus CYR598 self-winding calibre, which is 100 per cent Swiss made and was developed in conjunction with Jean-François Mojon.

TOURBILLON MANÈGE by Revelation

The Tourbillon Manège takes its name from the unique configuration of the tourbillon design, which resembles a merry-go-round (“manège” in French) due to the way in which the regulating organ is fixed to a rotating platform—the bridge of the tourbillon, which is inserted between two wheels mounted on the central axis of the watch. The timepiece is available in 18-carat white, yellow or rose gold using the signature Revelation case, which features a hinged cover that can be lifted to admire the Tourbillon Manège movement in all its splendour.

PARIS FOREVER by Tournaire and Technotime

This highly unusual timepiece is the result of nearly 18 months of work to reproduce, in a tourbillon, the architecture familiar from Philippe Tournaire’s rings. The watch design represents the French capital through its architectural highlights and the case, in gold and sapphire, is constructed around four classic architectural columns: Doric, Ionian, Tuscan and Corinthian. The TT791.00 calibre powering the watch was awarded first prize in the tourbillon category at the 2011 Chronometry Competition and boasts a double barrel that offers a five-day power reserve.

CHERRY BLOSSOM FEMINE POWER by Quinting

This watch is part of Quinting’s Art Collection and celebrates feminine power with two animated birds flying around a cherry blossom tree, which represents feminine power and beauty in Asian cultures. It is powered by Quinting’s Tech 5 movement, which creates the beautiful animation through a combination of seven perfectly aligned sapphire crystals housed inside the 39mm stainless-steel case. The yellow bird is on the hour sapphire, the blue one on the minute sapphire, and the cherry blossom tree on the base sapphire crystal.
